

Proposed Solution

Product overview and resources

Date	30 September 2026
Team ID	Not provided
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Team	Lavinraj (Team Leader), Subash, Rahul, Hariharansudhan
Maximum Marks	5 Marks

Field	FitBuddy definition
Objective	Generate personalized, practical and safety-conscious weekly fitness plans using Gemini models.
Scope	Profile collection, plan generation, warm-up/cool-down, exercise alternatives, progression notes, progress check-in and export.
Primary users	Beginners, busy students/professionals, home-workout users and returning exercisers.
Out of scope	Diagnosis, injury treatment, medical nutrition, emergency advice and replacement of a certified professional.
Key differentiator	AI flexibility combined with a validated output structure and explicit safety boundaries.

Representative scenarios

- A beginner requests three 30-minute home sessions with no equipment and receives a balanced full-body week.
- An intermediate user requests four gym days focused on strength and receives progressive compound and accessory sessions.
- A user with knee discomfort is not diagnosed; FitBuddy provides a caution, requests professional clearance when appropriate, and avoids presenting a medical prescription.

Resource requirements

Resource	Requirement
Development	Four team members, Git repository, code editor and browser testing tools.
Runtime	HTTPS-capable server environment, Gemini API access and protected environment configuration.
Data	Synthetic test profiles across goals, levels, equipment, schedules and safety edge cases.
Documentation	README, environment template, prompt contract, API notes, test report and demo script.
