

Communication

Presentation structure and message

Date	30 September 2026
Team ID	SWTID-2026-9380
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Team	Lavinraj (Team Leader), Subash, Rahul, Hariharansudhan
Maximum Marks	3 Marks

Segment	Speaker	Key message	Time
Opening and problem	Lavinraj	Generic fitness plans fail when they ignore the user’s reality.	1 min
User journey and interface	Subash	A short profile turns complex choices into a guided experience.	2 min
Gemini and validation	Rahul	AI composes the plan; schemas and application rules verify it.	2 min
Safety, testing and future	Hariharansudhan	Responsible boundaries and measured quality make the solution credible.	2 min
Closing	Lavinraj	FitBuddy makes a practical weekly plan easier to start and adapt.	1 min

Communication standards

- Use one consistent term: “AI-assisted fitness plan,” not “medical recommendation.”
- Show the input-to-output transformation rather than reading slides.
- Explain one limitation openly and the control used to manage it.
- Keep backup screenshots or a recorded flow if the model service is unavailable.
- End with measurable next steps, not unsupported accuracy claims.

Demonstration of Proposed Features

Live walkthrough checklist

Date	30 September 2026
Team ID	Not provided
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Team	Lavinraj (Team Leader), Subash, Rahul, Hariharansudhan
Maximum Marks	3 Marks

Step	Action	Visible proof
1	Open FitBuddy on a mobile-sized viewport.	Readable form, labels and focus states.
2	Enter a beginner, three-day, no-equipment profile.	Validated selections and clear safety notice.
3	Generate the plan.	Loading state followed by a complete weekly plan.
4	Open Day 1.	Warm-up, exercise dosage, rest, alternatives and cool-down.
5	Change session duration from 30 to 20 minutes.	Regenerated plan respects the changed constraint.
6	Enter an unsafe/medical request in a controlled test.	FitBuddy avoids diagnosis and displays an appropriate boundary.
7	Print or export the plan.	Clean output without controls or API information.

Demo acceptance

The demonstration is complete only when the displayed output passes the required schema, matches the selected number of days and session duration, and contains no medical diagnosis or exposed credential.

Project Demo Planning

Run-of-show and contingencies

Date	30 September 2026
Team ID	Not provided
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Team	Lavinraj (Team Leader), Subash, Rahul, Hariharansudhan
Maximum Marks	3 Marks

Time	Activity	Owner	Backup
00:00–01:00	Problem, users and value proposition	Lavinraj	Opening slide
01:00–03:00	Profile entry and validation	Subash	Prepared screenshots
03:00–05:00	Gemini generation and architecture	Rahul	Saved valid response fixture
05:00–07:00	Plan review, adaptation and safety test	Hariharansudhan	Recorded walkthrough
07:00–08:00	Testing status, future scope and close	Lavinraj	PDF results summary
08:00–10:00	Questions	All	FAQ sheet

Pre-demo checklist

- Use synthetic user data only.
- Verify the configured Gemini model and quota.
- Confirm the API key is server-side and not visible in browser requests or slides.
- Warm up the deployment and test the primary scenario.
- Prepare one valid saved response and screenshots for offline fallback.
- Assign a timekeeper and rehearse handovers.

Scalability & Future Plan

Growth path after the validated minimum product

Date	30 September 2026
Team ID	Not provided
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Team	Lavinraj (Team Leader), Subash, Rahul, Hariharansudhan
Maximum Marks	3 Marks

Horizon	Enhancement	Dependency / safeguard
Near term	Exercise library with reviewed instructions and media	Licensed content and accessibility descriptions
Near term	Plan history and progress check-ins	Authentication, privacy controls and deletion
Medium term	Multilingual plans	Human language review and safety consistency tests
Medium term	Wearable activity import	Per-user consent, provider integration and data minimization
Medium term	Coach review workflow	Role-based access and audit history
Long term	Adaptive periodization from longitudinal progress	Sufficient validated data and conservative change rules
Long term	Voice guidance and form-support integrations	Latency, accessibility and explicit non-diagnostic limits

Scalability approach

- Keep the model adapter replaceable and cache only non-sensitive reusable content.
- Queue generation at peak demand and communicate progress to the user.
- Separate static exercise knowledge from generated plan composition.
- Measure latency, schema failure, safety flags and user feedback by version.
- Use staged rollouts and rollback for prompt or model changes.

Team Involvement in Demonstration

Roles and contribution matrix

Date	30 September 2026		
Team ID	Not provided		
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models		
Team	Lavinraj (Team Leader), Subash, Rahul, Hariharansudhan		
Maximum Marks	3 Marks		

Member	Project role	Primary contribution	Demo responsibility
Lavinraj	Team Leader / Product & Integration	Scope, architecture alignment, sprint coordination and final integration.	Open, explain value, coordinate flow and close.
Subash	Frontend & User Experience	Profile workflow, validation messages, results layout and accessibility.	Demonstrate profile entry and interface.
Rahul	Gemini Integration & Testing	Prompt contract, model adapter, schema validation and automated tests.	Explain generation, validation and evidence.
Hariharansudhan	Safety, Documentation & Deployment	Responsible-AI rules, documentation, release checklist and fallback assets.	Demonstrate safety boundary and future plan.

Shared responsibilities

- Every member reviews at least one other member’s work.
- All members participate in scenario testing and rehearsal.
- No feature is marked complete without evidence and owner sign-off.
- The team leader maintains the final scope, risk list and submission package.
